

**This specification** describes the situation of the Proximus network and services. It will be subject to modifications for corrections or when the network or the services will be modified. Please take into account that modifications can appear at any moment. Therefore, the reader is requested to check regularly with the most recent list of available specifications that the document in one's possession is the latest version.

Proximus can't be held responsible for any damages due to the use of a version of this specification which is not included in the most recent list of available specifications (list always available with a request to the e-mail address mentioned in the underneath paragraph).

Whilst every care has been taken in the preparation and publication of **this document**, errors in content, typographical or otherwise, may occur. If you have remarks concerning its accuracy, please send a mail to the following address [Proximus.uni.spec@Proximus.be](mailto:Proximus.uni.spec@Proximus.be) and your remark will be transmitted to the right Proximus department.

The User Network Interface Specifications published via Internet are available for your information but have no official value. The only documents with an official value are printed on a specific paper.

If you want **to get an official version of this User Network Interface Specification**, please order it by sending your request by mail to [Proximus.uni.spec@Proximus.be](mailto:Proximus.uni.spec@Proximus.be)

**SPECIFICATION OF THE NETWORK SIDE OF THE USER-NETWORK  
INTERFACE FOR ISDN-BA- AND ISDN-PRA NETWORK LAYER 3**

**Subscriber control procedures (Stimulus protocol) for ISDN supplementary services**

## 0. Document history

Every update of this document results in a complete new version with new version number and release date.

Version	Date	Main or important changes since previous version
1.0	31 OCT 2002	<ul style="list-style-type: none"><li>• First version</li></ul>

## 1. Scope

This document is applicable to the Siemens 'EWSD V16B' - and 'Alcatel S12 Pack 8' - switching systems.

It gives an overview of the generic keypad protocol procedures (service codes, keypad strings and the application of tones and announcements) for the subscriber control of the by Proximus commercialized supplementary services in the ISDN-network.

The specification is valid for both ISDN Basic Acces (BA) and ISDN Primary Rate Access (PRA).

Some parts of the technical implementation may be different in the two used switching systems. In this case, specific switch-dependent comments are added or tables are used explaining the technical implementation for both systems.

### 3. Symbols, definitions and abbreviations

For the purpose of the present document, the following symbols, abbreviations and definitions applies:

#### 3.1. Abbreviations

ACR	Anonyeous Call Rejection
BA	Basic Access
BP	Barring Program
BS	Bearer Service
CFB	Call Forwarding on Busy
CFNR	Call Forwarding on No Reply
CFU	Call Forwarding Unconditional
CLIR	Calling Line Identification Restriction
CW	Call Waiting
DN	Directory Number
DSS1	Digital Subscriber Signalling System No. one
ETS	European Telecommunication Standard
EWSD	Proximus Switching System of Siemens
FDC-T	Fixed Destination Call - Timed
FTN	Forwarded-to-number
GD	General Deactivation
ISDN	Integrated Services Digital Network
ITU	International Telecommunication Union
OCB	Outgoing Call Barring
PIN	Personal Identification Number
PRA	Primary Rate Access
REC	Recorded announcement
S12	Proximus Switching System of Alcatel
SC	Service Code
SCT	Special Confirmation Tone
SIT	Special Information Tone
SUN	Served User Number
UNI	User Network Interface

#### 3.2. Definitions

Activation	An action taken by a user or by a service provider to change the state of a service from inactive to active. For example, to activate (switch on) call waiting enables the call waiting indication and service to be invoked by the service provider whenever a call is presented to a busy terminal.
Basic service	A bearer service or teleservice. See also section "D.5 Formal definition of basic services" of ETS 300 196-1
Bearer service	A type of telecommunication service that provides the capability for the transmission of signals between user-network interfaces.
Data check	The interrogation function that compares data input by a user during an interrogation procedure with the data stored with respect to a service. For example, to confirm a Personal Identity Number (PIN) or other secure data item.
Data request	The interrogation function that enables a user to obtain information on the existing data stored with respect to a service.

Deactivation	An action taken by a user or by a service provider to change the status of a service from active to inactive. For example, to deactivate (switch off) call waiting means the call waiting indication and service will not be invoked by the service provider whenever a call is presented to a busy terminal.
En-bloc dialling	From a user's perspective, the form of dialling where a user inputs an address or supplementary service command before going off-hook or "sending" it to the network. The address or command may or may not be available to the user for editing before the user goes off-hook or "sends" the information to the network.
Erasure	An action taken by a user or by a service provider to delete data stored against a particular service by a previous registration.
Functional protocol	A generic form of protocol for sending information from the user's equipment (i.e. a terminal) to a network or service provider, which implies in this case, that the user's equipment has knowledge of the supplementary service. In effect the terminal translates the users commands into specific supplementary service function related signals that the network or service provider can interpret.
Interrogation	An action taken by a user to request information from a service provider relating to a particular service. For the purposes of this ETS, the interrogation function shall include Status Check, Data Request and enable Data Check.
Invocation	An action taken by a user or by a service provider to execute a specific service function within real time. For example, by a service provider forwarding an incoming call for a user who has activated the call forwarding service and registered a forwarding-to number; by a user invoking an active call transfer service when the two current calls are in the relevant states; or by a user, on a per call basis, to invoke (i.e. temporarily activate) a supplementary service, e.g. to switch on CLIR and allow the restriction of Calling Line Identification information for the current call, although Calling Line Identification Restriction is NOT normally active.
Network	In this description, network refers to all the ISDN telecommunications equipment that has any part in processing a call or a supplementary service for the user referred to. It does not include the ISDN terminal.
Overlap dialling	From a user's perspective, the form of dialling where a user goes off-hook and then inputs the address or supplementary service command digit by digit.
Registration	An action taken by a user or by a service provider to store specific data necessary to enable subsequent operation of a service. For example, the "forwarding-to number" in the Call Forwarding Unconditional service.
Service code	A two or three digit string used within a command dialogue control action to identify a supplementary service.
Status check	The interrogation function that enables a user to request information on the existing status of a designated service.
Stimulus protocol	A generic form of protocol for sending information from the user's equipment (i.e. a terminal) to a network or service provider, which implies in this case, that the user's equipment does not require any knowledge of the supplementary service. In effect the terminal is transparent to the user's commands.
Teleservice	A type of telecommunication service that provides the complete capability, including terminal equipment functions, for communication between users according to protocols established by agreement between Administrations.

#### **4. General**

Keypad signalling procedures are used for the activation, registration, invocation, registration, deactivation, erasure and interrogation procedures associated with many supplementary services.

Basic call signalling procedures are followed with the inclusion of service information from the user to the network in Keypad facility information elements. Information is provided from the network in Display information elements which can be included in all messages except the SUSPEND, RESUME and USER INFORMATION messages in accordance with basic call procedures (ETS 300 102-1).

## 5. Service codes

Allocation of the service codes for the by Proximus commercialized ISDN supplementary services.

<u>Service Code</u>	<u>Supplementary Service</u>
<u>001</u>	<u>General Deactivation</u>
<u>21</u>	<u>Call Forwarding Unconditional</u>
<u>34</u>	<u>Outgoing Call Barring</u>
<u>43</u>	<u>Call Waiting</u>
<u>53</u>	<u>Fixed Destination Call - Timed</u>
<u>61</u>	<u>Call Forwarding on No Reply</u>
<u>67</u>	<u>Call Forwarding Busy</u>
<u>933</u>	<u>Anonymous Call Rejection</u>
<u>94</u>	<u>Personal Identification Number (Change of PIN)</u>

## 6. User procedures

User procedures for the user control of the by Proximus commercialized ISDN supplementary services.

Supp. Serv.	Procedure	Keypad string <sup>(1) (2) (3) (4)</sup>

PIN	Registration	* 94 * <old PIN> * <new PIN> * <new PIN> #	* 94 * <old PIN> * <new PIN> * <new PIN> #

### Notes :

- Note 1 Keypad strings are included in keypad facility information elements in SETUP or INFO messages
- Note 2 "not applicable" does not necessarily mean that the service is not applicable. It only means that there is no keypad procedure for this service.
- Note 3 Optional parts of keypad strings are enclosed in brackets of the type "(" and ")". The user can choose to include them or leave them out.
- Note 4 Wherever the PIN parameter is shown as { \* PIN }, it means that it has only to be used in case of the subscriber has subscription for a PIN.
- Note 5 This service gives the user the possibility to deactivate by one command some supplementary services which he has activated at his access. The following supplementary services, presently offered to customers, are deactivated by GD:
- Outgoing Call Barring (OCB)
  - Call Forwarding Unconditional (CFU)
  - Call Forwarding on Busy (CFB)
  - Call Forwarding on No Reply (CFNR)
  - Anonymous Call Rejection (ACR)

### Abbr. :

ACR	Anonymous Call Rejection
BP	Barring Program
CFB	Call Forwarding Busy
CFNR	Call Forwarding on No Reply
CFU	Call Forwarding Unconditional
CW	Call Waiting
DN	Directory Number
FDC-T	Fixed Destination Call - Timed
FTN	Forwarded-To-Number
GD	General Deactivation Outgoing
OCB	Call Barring
PIN	Personal Identification Number (Password)

## 7. Tones, announcements, displays and causes

This section defines, for the different commercialized supplementary ISDN services, the tones, announcements, displays or causes sent to the user as responses on the user procedures.

Tones or announcements are only applicable if the bearer capability is *speech, 3.1 kHz audio* or *64 kbit/s unrestricted digital information with tones/announcements* (also sometimes referred to as *7 kHz audio*). These tables only indicate the name of the tone or announcement. The actual definition of the tones is included in Proximus UNI-specification "Information tones" (Ref. BGC\_D\_48\_9807\_30\_04\_E).

The 'Display' column defines what information is sent to the user in the ISDN Display information element.

The "Cause" column normally defines which DSS1 cause is sent to the user.

### 7.1. Tones, announcements, displays and causes - S12 Pack 8

Suppl. Serv.	Procedure	Case	Tone or Ann.	Display	Cause
